## Stretch Out

A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

### Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

### Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

you think you  
should be.*

*Relaxation is  
who you are.*

-Chinese Proverb

Even just a few minutes at work can help turn bad habits into good ones.

### Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

### Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

### Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

### Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

## Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

# Cultivating a Gardening Habit

## Discover the Health Benefits of Yard Work

Feeling the need to exercise, clean up your diet, meditate? Want to be more creative, get out and meet people, enjoy the outdoors, and slow down? There's one activity in which you can accomplish all of these objectives: gardening.

### ENCOURAGING EXERCISE

Studies show that vigorous digging burns 500 calories an hour, weeding burns 210 calories, and mowing the lawn burns 400 calories. As a moderate exercise, gardening has been found to decrease the risk of heart disease and diabetes, and a study at the University of Arkansas found that gardening was almost as effective as weight lifting in reducing the risk for osteoporosis in women. So instead of taking that indoor aerobics class this summer, try mowing the lawn or planting an herb garden.

As with any exercise regimen, the key is to start at a comfortable pace and gradually work your way up to longer, more difficult activities. Your heart rate should be about the same as when you

take a brisk walk.

### IMPROVING YOUR DIET

Gardening will also likely help you eat better. Research shows that people who grow gardens eat more vegetables and fruits than those who don't. Growing fresh herbs, even in a container on the deck or balcony, is another great way to add flavor and freshness to home-cooked meals and an incentive to try new recipes.

### BOOSTING YOUR SOCIAL LIFE

Gardening can also be quite social. Whether at a garden club, a community garden, or an online forum, people love to share ideas, solve common problems, and connect through mutual interests.

### EASING STRESS

And finally, gardening is a great way to manage stress. Spending time outside and tuning in to the rhythms of nature, we're reminded to be patient, slow down, and breathe the fresh air. Whether growing flowers, vegetables, or

herbs, a garden reminds us of our connection to life and the abundance that nature so freely gives.

**Gardening burns calories and improves diet.**

## Healthy Grilling Tips

Summertime and grills go together like a hot dog and mustard. But could that hot dog actually be doing you harm? Alice Bender, registered dietician at the American Institute for Cancer, says that diets high in beef, pork, and lamb, as well as processed meats like hot dogs, are linked to an increased risk of colon cancer. She suggests that sticking with chicken and fish can "make this summer's backyard grilling both healthier and more flavorful." Use herbs and spices to amp up flavor, and try marinating for 30 minutes before you grill, which can reduce the amount of heterocyclic amines--the potentially cancer-causing compounds formed when grilling.

Here are some other tips to help reduce health risks associated with the grill:

### TRIM THE FAT

Fat can increase smoke, which may contain carcinogens, so choose leaner meats and trim excess fat.

### DON'T BURN IT

Charred, well-done meat can increase your risk of pancreatic cancer, according to a study from the University of Minnesota.

### BUT COOK IT THROUGH

Make sure that you hit the USDA recommendations for internal temperature, which can be found at [www.foodsafety.gov](http://www.foodsafety.gov).

### MORE VEGGIES!

Grilling vegetables does not create the same heterocyclic amines as grilling meats. Plus, veggies have less fat and cholesterol in general.

### KEEP IT CLEAN

Don't let a charred mess build up on your grill, because it will eventually find its way onto your food.

step through  
self-awareness  
must be through  
the body.*

-George Sheehan

I'll be massaging in Jefferson City, MO at Cosplacon over Father's Day weekend, June 13-15th. So feel free to stop by the booth!

With Father's Day right around the corner, don't wait until summer stresses you and schedule a relaxing massage!

I'll be taking 20% off all fathers, brothers, grandfathers, sons, and fathers-to-be that come in to my Westport office this month!

Be sure to call or email ahead to ensure you get the time you want and need!

I hope everyone has a great month!
